Summary

Java Full Stack Engineer with 4+ years of experience designing, developing, and scaling distributed microservices in **Banking and Insurance** domains. Expertise in Java, Spring Boot, Microservices, Kafka, React.js, Redis, and Cloud-Native architectures. Proven track record of building high-throughput event-driven systems processing 10M+ transactions daily, improving application performance by 35%, and delivering secure enterprise-grade solutions. Experienced in REST APIs, OAuth2, CI/CD, TDD, System Design, and Agile development.

Technical Skills

Languages	:	Java, JavaScript, SQL
Backend	:	Spring Boot, Spring Security, Spring Data JPA, Hibernate, Microservices, REST APIs, OAuth2, JWT
Messaging	:	Apache Kafka, Event Driven Architecture, Asynchronous Communication
Frontend	:	React.js, Redux, Material UI, HTML5, CSS3
Databases	:	MySQL, Oracle, Redis
DevOps	:	Docker, CI/CD, Jenkins, Git, BitBucket, Maven, SonarQube
Cloud	:	AWS EC2, AWS S3, AWS IAM
Monitoring	:	ELK Stack, Prometheus, Grafana
Testing	:	JUnit5, Mockito, TDD
Architecture	:	Microservice Architecture, Distributed System, Design Pattern, System Design
Tools	:	Coude AI, GitHub Copilot

Experience

Enrichepro Software Pvt. Ltd. May 2022 – Present
Pune, India

Senior Software Engineer April 2025 - Present
Software Engineer *May 2022 - March 2025*

- Architected and developed scalable microservices using Spring Boot, Spring Cloud, and Spring Data JPA, supporting high-volume enterprise banking applications and reducing deployment complexity by 40%.
- Engineered a Kafka-based event-driven architecture processing 10M+ real-time transactions daily with high availability and fault tolerance.
- Implemented OAuth2 and Spring Security authentication mechanisms securing APIs for thousands of enterprise users while reducing security vulnerabilities by 50%.
- Increased automated test coverage upto 95% through Test-Driven Development (TDD), JUnit5, and Mockito, significantly reducing production defects.
- Designed Redis distributed caching solutions reducing database load by 35% and improving API response time by 40%.
- Optimized JVM performance, SQL queries, and application scalability, improving throughput by 10% and reducing latency.
- Established end-to-end observability using ELK Stack, Prometheus, and Grafana, reducing Mean Time To Resolution (MTTR) by 30%.
- Implemented Builder, Factory, Strategy, Singleton, Circuit Breaker and Saga patterns to improve maintainability and resilience of microservices.
- Designed and developed the front-end applications using ReactJS with 1,000+ reusable components, Material UI and Redux. Improved code manageability and reusability by 20%
- Mentored 3 junior engineers, conducted code reviews, enforced coding standards, and improved team delivery velocity.

certification

Post Graduation Diploma in Advanced Computing CDAC - Bangalore

Education

M. S. Bidve Engineering College Latur, Maharashtra, India
Bachelor in Mechanical Engineering

Projects

Credit Score Analysis Tool

Client : Swedbank

Description : Automated credit score evaluation platform integrating data from multiple sources to provide real-time scoring and predictive analysis. Utilized Microservices architecture for scalability and efficiency.

Responsibility :

- Developed Kafka-powered real-time credit scoring engine reducing decision processing time by 60%.
- Collaborated with the team to develop REST APIs and implement business features for seamless functionality.
- Integrated OAuth for secure user authentication, ensuring robust system security.
- Implemented Redis caching reducing API latency by 40%, utilizes Redis cache for efficient data caching, optimizing application performance and reducing database load.
- Contributed to distributed microservices architecture supporting millions of customer credit evaluations annually.

Claims Processing System

Client : Statewide Insurance Group USA

Description : It is a centralized platform designed to efficiently manage and process insurance claims, incorporating real-time updates and automation to streamline the claims handling process.

Responsibility :

- Worked as a backend developer with spring boot and java as a core technology.
- Developed real-time claim status updates to enhance transparency and client satisfaction.
- Working on the REST APIs and developing business features.
- Implemented OAuth for secure user authentication, improving system security.
- Integrated Redis cache for efficient data caching, significantly boosting application performance and reducing database load.
